Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
KCRO	2/16/2023	2/15/2023	University of Central Missouri	Warrensburg Johnson	Asbestos	JS		
Concern No. 52435 Concern Info From David Ruby: I just received an anonymous concern regarding the demolition of University of Central Missouri's Nattinger-Bradshaw Hall at 620 S. Washington, Warrensburg, in Johnson County. I tried directing the caller to KCRO but they claim to have already been in contact regarding this issue and wanted to speak to someone else. I tried looking up the notification number on our website but couldn't find any projects at that address, though I did see a few other addresses owned by UCM. The concerned party seems to be involved closely in this project and wants to remain anonymous for their safety. They claim that a full asbestos inspection was not performed on this building, only a partial inspection. They also claim that asbestos containing joints were discovered on the property, and while the owners are claiming these materials were removed, they are still in place. They said that the owners are trying to start demolition as soon as possible, and urged us to act quickly.								
Comments ?A site visit was conducted on 2/16/23. Additional sampling by Occu-Tec indicated asbestos materials still remain in the buildings. A demolition inspection will be conducted by the Department on 2/28/23.								
KCRO	2/22/2023	2/21/2023	Ford Motor Company KC Assembly Plant	Claycomo Clay	Odor	CK		
Concern No. 52443 Concern Info Throughout the day, the overwhelming smell of paint or paint thinner is so strong that it causes me to start having migraine This morning (February 21, 2023) it was so strong that I couldn't make it from my front door to the truck without feeling like couldn't breathe.								
Comments Odors were present during the investigation, but below the regulatory limit. No violations were observed.

Concerns Investigated Between February 16, 2023 and March 15, 2023

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 52585 Concern Info Concerned party called and reported that AA Quarry recently blasted today, and they could actually hear the blasting along with their homes shaking. Additionally, they appear to be grinding rock, and the wind is extremely high today and dust is flying all around. They stated this is really getting out of hand and they've placed concerns previously, but there appears to be very little response with the exception of the facility being told to not do it, but they go right back to doing so.								
Comments ?No violations were observed during the investigation. Continued observations will be conducted when inspectors are in the area and in response to additional concerns.								
KCRO	3/6/2023	3/6/2023	ZMDR Republic Foods	Lone Jack Johnson	Odor	JH		
Concern No. 52680 Concern Info Horrible odors at my home from Republic Foods.								
Comments ?There was odor, but it was light and would not have been detected at 2:1 D/T.								
KCRO	3/6/2023	3/6/2023	Boulder Industries	Maryville Nodaway	Odor	JS		
Concern No. 52682 Concern Info EXTREMELY strong chemical smell coming from Bolder Industries. Kids will not go outside to play on this beautiful day because their eyes water and the smell hurts their lungs. If we open the door to the house it quickly makes being inside unbearable. I would wonder if all the owners and investors of this so called green company would like to smell these chemical smells at their homes across the country. I would guess they would be disgusted. Would love to see a permanent air quality monitoring station installed to monitor this business that way MODNR can issue NOV's to this company.								
Comments Due to previous concerns, a Letter of Warning has been issued to Bolder Industries for failure to control emissions with flares as required. No further violations were found during this investigation.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 52859 Concern Info The concerned party stated that David Montineer and his son Jake are burning some type of material late at night every couple of days. This material is putting off a strong chemical smell that burns their eyes and noses.								
Comments								
KCRO	3/15/2023	3/15/2023	Livestock Exchange LLC	Kansas City Jackson	Asbestos	MC		
Concern No. 52864 Concern Info A Missouri-certified asbestos inspector referred an asbestos issue he had been hired to look into. He was hired by an attorney who works out of this building because she was concerned about a renovation across from her office involving a steam line. The renovation is on the 9th Floor of 1600 Genessee Street (the Golden Ox Building) in the north hallway.								
The inspector sampled the steam line and it came back positive for asbestos (15% chrysotile). This project started last week and is being done by employees of the building owner. The asbestos inspector said the project has resulted in asbestos contamination to the area.								
Comments Referred to delegated local agency, City of Kansas City Health Department's Air Quality Program?.								
NERO	2/16/2023	2/16/2023	Greg Buckman	Boone	Open Dumps Scrap Tire Dump Open Burning	BH		
Concern No. 52558 Concern Info On 2/16/2023 the Northeast Regional Office recieved an concern about dumping/burning going on at the property of Greg Buckman. The contents are white goods,tires and other waste that has been burned throughout the years. The concerned party stated that he thinks that the waste is not all of the property owners waste because there are so many appliances on the property.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No.	52705	Concern Info	Concerned about his neighbors slaughter plant next door. All the guts and hides the neighbor would put behind a building and it would start stinking. The neighbor also has a lagoon that overflows and he has been putting the guts in there along with jugs of some type of chemical then pumping it out from Friday night-Saturday morning. Also when it is raining the lagoon overflows onto his land and a nearby creek. The sheriff's department has been out and has reports on the smell and the department doesn't know where the smell is coming from. Lagoon stinks on a daily basis. Latest report to Macon office was January 6th. Caller wants the EPA involved since he said DNR isn't doing anything about it. He is also upset that the pictures he has taken we won't use because he took them and we didn't. Caller also stated that his neighbor has tried to burn the guts and hides and has tried to do everything to get rid of them. Caller said DNR has been out and told the neighbor he needs to land apply but didn't give a time limit on it. Caller also said the neighbor use to have a gut truck come out and pick up the guts from Illinois. Caller is very upset and wants EPA involved and if they won't he said he will be taking his photos to the media. He wants to be kept in the loop and know what the next steps will be.					
Comments	The lagoon had several feet of freeboard and there was no evidence observed of any discharges. The water is pumped and land applied in a wooded area as needed. No ashes were observed. Ashes had been found during a previous inspection and Albert Kendrick stated that he had sent all of those ashes to a landfill. All compost material had been removed from the old compost pile to the north, there was some mulch remaining in that area but no composted material was observed. No evidence of leachate runoff was observed from the new compost pile on the south end of the site. There are mulch berms located below the compost that any leachate runoff would flow through if it occurred. There is a pile of finished compost material that also has a mulch berm located below it. No evidence of leachate runoff was observed there either. Only negligble odors were noted around the compost area or the lagoon. Josh Hufford of the NERO's Air Unit monitored the site with a Nasal Ranger and had no detectable odor.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 52700	Concern Info Caller stated that a good portion of the dust collectors do not work properly for various different processes. They also indicated that the bags may have holes or the collection units may be turned off. They stated that this has been going on for years. Stated that the dust collection in the crusher is not working. The facility is not mapping or recording road watering anymore. Caller was concerned that oil used to be dumped in the old auto shop area. Caller stated that there is a location near the middle of the curve on Hwy 79 near Monkey Run Trail that produces a tar or grease like liquid that at times needs to be cleaned out of the ditch. Caller stated that there might be a PVC pipe in this location.							
Comments	No violation of the Missouri Air Conservation Commission regulations was found at the time of the investigation. Some oil was found spilled outside a shop building. The facility promptly cleaned up the area.							
NERO	3/13/2023	3/6/2023	Timberline Stables	New Bloomfield Callaway	Open Burning	DB		
Concern No. 52841	Concern Info Caller reports burning manure at a commercial stable							
Comments	Burning appears have been compliant with open burning rule as natural vegetation from a business burned IAW 10 CSR 10-6.045(3)(D) and (E).

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Comments	<p>I arrived at the St. Francois Health Center located at 1025 West Main Street in Park Hills at approximately 10:45 AM. From the parking lot, I called Mark Bonney who was the Air Sampling Professional for this abatement project. I informed Mark that we had received an environmental concern relating to the containment of the abatement project as well as the concerned party saying they could taste dust in the air. I asked Mark if he was aware of any discrepancies with the abatement or if he noticed anything out of the ordinary. Mark informed me that there was nothing out of the ordinary with the abatement. In fact, Mark was able to give me the dates for the three air clearance samples that were taken from the project: January 24, January 31, and February 3. Mark told me that all three samples came back good and met the clearance criteria. A post-notification was submitted for this project as well which outlined the air clearance samples more in depth.</p> <p>Mark told me that Schemel Companies was completely finished with the abatement project not long after that last air clearance sample on February 3. I thanked Mark for his cooperation and ended the phone call.</p> <p>After speaking with Mark Bonney, I contacted Jake Dudenhoeffer, Project Manager. I explained the environmental concern that we received to Jake just as I did with Mark. Jake reiterated the same thing that Mark had said. Jake told me that Schemel Companies was completely done with abatement and had containment entirely deconstructed by the end of the day on Monday, February 6, 2023. Jake also said that he didn't notice anything out of the ordinary with the containment. Jake did mention that Brockmiller Construction came in soon after the abatement to start the renovation process. He suggested that they were likely in the Health Center doing work when the concern came in on February 10, 2023. Jake gave me the phone number for Andy who is the Superintendent for Brockmiller Construction. I thanked Jake for his time and ended the phone call.</p> <p>I called Andy with Brockmiller Construction and explained the situation to him and he mentioned that he was at the Health Center currently so I went to go speak with him in person. Andy told me that he thought Schemel Companies did a great job with the abatement. Andy explained what his crew was doing at the moment including putting in some new ceilings. Andy did mention that they removed some flooring which came up clean, but there was some glue still stuck to the concrete that they used a buffer on to get up. He said the dust the concerned party was supposedly tasting could have been some dust from general construction work, but Andy also showed me the air purifier that was used while the buffer was going. After walking through the Health Center for a bit, I thanked Andy for his time and left the site.</p> <p>This concern was received on February 10, 2023, but Schemel Companies was completely finished with the asbestos abatement and had the containment completely deconstructed by the end of the day on Monday, February 6, 2023. Post-notification showed waste receipts as well as in-depth analysis on the air clearance samples that were taken. The air clearance samples all came back <0.01 f/cc. Brockmiller Construction came in soon after the abatement to begin renovations and it is likely that the concerned party mistook the open area where construction was occurring as the</p>

			abatement containment and the potential taste of dust in the air could have been from the renovations going on after all asbestos was removed from the building.					
			There were no violations of Title 40 Code of Federal Regulations Part 61 Subpart M - National Emissions Standard for Asbestos.					
SERO	2/17/2023	2/14/2023	Ronald Thiel	Iron Mountain Lake St. Francois	Open Burning	HC		

Concern No. 52610 **Concern Info** The caller reports her mother is experiencing the burning of house renovation waste by her neighbor. It has been going on for 2.5 to 3.5 years. On the date of the latest event, the affected person had to leave her house because of burning smoke in strong concentration in her house. The burning was reportedly within 20 feet of her house. This person burns all forms of waste building materials, including insulated electrical wire. The person doing the burning is reported to have an aggressive attitude and the caller encouraged Department staff to request law enforcement assistance when conducting an investigation. The affected person is Kathy Merrims 314-422-8122.

Comments On 01/17/2023 I spoke with City Clerk Shannon Keith via phone regarding Ronald Thiel and his standing in the community. She informed me that there has not been any other reports or problem regarding to Ronald Thiel besides what comes from Kathy Merrims. She informed me that Iron Mountain Lake does have a burn ordinance and does issue burn permits which is a signed legal document that lists materials that are not allowed to be burned. Shannon Keith sent me a copy of the signed burn permit. Iron Mountain Lake does not have any officers which is why tickets have not been issued in the past, St Francois County will not issue tickets because they do not have a county wide burn ordinance. I was provided a Cuba Missouri address 194 Idlewild road, Cuba Mo, 65453. ?

A site visit was conducted on 02/27/2023 around 2:00 p.m. The house was unoccupied so I was unable to access the property. Viewing from the drive way I was unable to see any areas that would suggest burning of building materials had been taking place. I left several factsheets in a highly visible area on the front porch those factsheets included "Facts on Open Burning under Missouri Regulations - PUB 2047", "Managing Construction and Demolition Waste - PUB2045" and "Illegal Disposal of Construction and Demolition Wastes - PUB-2251" as well as a business card for contact information.

No violation at this time. Situation is worth monitoring.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
SERO	2/17/2023	2/15/2023	Cowtown Express, Rolla	Rolla Phelps	Asbestos	DB		

Concern No. 52757 **Concern Info** There is a former carwash that was recently demolished at 1009 S. Bishop Avenue in Rolla, MO.

Comments On February 17, 2023, I contacted Rolla City Hall in an attempt to get information on the recent demolition of the Cowtown Express carwash in Rolla. I was directed to Steve Flowers, Community Development Director. Steve was able to email me a copy of a demolition project-specific permit of the type that the City of Rolla issues for all demolition projects within the City of Rolla. From this demolition permit, I was able to find contact information for the demolition contractor, Reliable Excavating.

?I called Reliable Excavating on February 22, 2023 and spoke with Doug Sherfy, Owner of Reliable Excavating. Speaking with Doug, he stated he was not aware of any asbestos inspection being conducted on the building prior to demolition nor did he notify the demolition project. According to Doug, the waste was taken to the Prairie Valley Landfill in Cuba, with the exception of some clean fill.

Reliable Excavating is in violation of Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.241 Asbestos Projects - Registration, Abatement, Notification, Inspection, Demolition, and Performance Requirements and Missouri Air Conservation Regulation 10 Code of State Regulation 10-6.080 Emission Standards for Hazardous Air Pollutants adopting by reference Title 40 Code of Federal Regulations Part 61 Subpart M - National Emission Standard for Asbestos.

A Letter of Warning (LOW) was issued on March 9, 2023 for the violations listed above

Cowtown Express was demolished by Reliable Excavating without the required inspection for asbestos-containing materials and without the required demolition project notification. Reliable Excavating is in violation of Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.241 Asbestos Projects - Registration, Abatement, Notification, Inspection, Demolition, and Performance Requirements and Missouri Air Conservation Regulation 10 Code of State Regulation 10-6.080 Emission Standards for Hazardous Air Pollutants adopting by reference Title 40 Code of Federal Regulations Part 61 Subpart M - National Emission Standard for Asbestos. ?

Reliable Excavating was issued a Letter of Warning on March 9, 2023 for these violations.

<p>Comments I arrived at 296 County Road 211 at 2:30 PM on February 16, 2023. I did not observe any active open burning on this day. I approached the home located on the property and knocked on the door several times, but there was no answer. On the northwest corner of the property, is what looks to be a small shed/home with some wood processing equipment outside. I also tried knocking on the door of this building, but again, received no answer. I left a door bag on the front door of the home which included a copy of 10 Code of State Regulation 10-6.045 Open Burning Requirements, PUB2047 – Facts on Open Burning under Missouri Regulations, and my business card with "Please call me." written on it. From County Road 211, I took some photographs of the site with the wood processing equipment and some wood piles in view and then I left the area.</p> <p>That same day, I tried calling Nathan Legrand, but did not get an answer. I left a voicemail explaining the environmental concern we had received and that I visited his address in an attempt to speak with him about the concern. I mentioned that I left a door bag with information in as well as my business card and encouraged him to contact me as soon as possible. I then ended the phone call and returned to the office. I tried calling Nathan again on February 22, 2023 and February 27, 2023, but did not get an answer. The voicemail box was full both of these times, so I could not leave a message.</p> <p>On the afternoon of February 27, 2023, Nathan returned my phone call. I explained to Nathan the environmental concern that we had received. Nathan then explained to me that contrary to the concern, he does not have a tree-trimming business and that the sawmill he operates on his property is for personal use only. I asked Nathan where he gets his wood from and he told me that he gets some from his own property and some from elsewhere. Nathan told me that he only burns every few months and that he doesn't burn much at all when he does decide to open burn. I explained to Nathan the minimum distance requirement of open burning which is no closer than 200 yards from the nearest occupied structure not owned by the party conducting the burning. Nathan assured me that he is burning well beyond 200 yards away from any occupied structure.</p> <p>On March 8, 2023, I visited 296 County Road 211 again. Upon my arrival, I could see a burn pile smoldering near the sawmill. Using a rangefinder, I measured the distance from County Road 211, close to two nearby homes, to the burn pile. I took the measurements from County Road 211 due to concern of trespassing on nearby properties. I took one measurement from County Road 211 next to the home located at 360 County Road 211 and that measured approximately 176 yards. I took another measurement from County Road 211 next to the home located at 260 County Road 211 and that</p>

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
			measured approximately 173 yards. Both of these homes are closer to the burn pile than what these measurements read given that I took the measurements from a farther distance than where the homes actually are. This sawmill meets the definition of a wood processing facility and is located less than one mile outside the city limits of an incorporated area. The measurements taken show that the burn pile is within the 200 yard minimum distance requirement given in 10 Code of State Regulations 10-6.045 Open Burning Requirements. ?					
			Conclusions					
			?The small "personal use" sawmill meets the definition of a wood processing facility and is located less than one mile outside the city limits of an incorporated area. The measurements taken show that the burn pile is within the 200 yard minimum distance requirement given in 10 Code of State Regulations 10-6.045 Open Burning Requirements. The source is, therefore, in violation of 10 Code of State Regulations 10-6.045 Open Burning Requirements. The source was issued an Unsatisfactory Findings Response Required letter on March 13, 2023.

--------	-----------------------	------------------	------------------------------------	-------------	-----------------	-----------------------	-----	------

Concern No. 52658 **Concern Info** CP states there is a auto mechanic shop that they believe is burning tires. They are seeing black smoke and terrible smell

Comments I arrived at 2629 Hwy 142, Moody, Mo 65777 around 11:30 a.m. on February 16, 2023. I spoke to the shop personnel, who informed me that they are not associated with the entire property only the shop building on site. It is still assumed that the tires were produced by businesses that have operated the garage on site. The shop has a tire cutter and had around 10 or so tires processed on site while I was there. I spoke with Joseph Overbeck who at the time was digging a hole and preparing to push the burning tires into to attempt to stifle the smoke. Joseph informed me that the fire department was out at the site the night before responding to a call regarding a possible brush fire at the location. Joseph told me that it was a lightning strike that started the fire, I obtained property owner and information and a contact number from Joseph Overbeck before leaving the property.

At 9:30 a.m. on February 17, 2023 I made contact with Adam Ledford via telephone. Adam Ledford explained to me that he received a call around midnight on the February 16, 2023 of a fire at the location. He explained no one was on site at the time of ignition and that lightning was the cause of the ignition. Adam Ledford informed me that the tires had been pushed into the holes and buried, mainly to help stop the piles from smoking and to stop the burning. I informed him that the Department would be in contact regarding further instructions. I also contacted Richard Leita, Fire Chief of the Moody Volunteer Fire Station who responded to the fire. Richard agreed to meet on a later date and provide any information as well as the report filed by the Moody Volunteer Fire Station.

On February 21, 2023 around 11:45 a.m. Jesse Evans of the Southeast Regional Office's Solid Waste Unit and I met with Adam Ledford and Richard Leita at the concern site. Richard Leita provided Jesse Evans with the report filed by the Moody Volunteer Fire Department. The group surveyed the area where the fires occurred Jesse and I took notes as Adam Ledford and Richard Leita recalled the night of the fire. Jesse Evans asked questions regarding the history of the scrap tires on the site and history of the property, before conducting a Solid Waste Inspection of mechanics shop on site. After the inspection we informed Adam Ledford that the Department would be in contact and that there may be removal obligation in order to return to compliance.?

Conclusions

Solid Waste Unit will be issuing a Letter of Warning.

Concern No. 52508 **Concern Info** CP states that the RP's property has very large piles of chicken manure that smell very bad on it. CP states the piles are higher than their trailer home. CP states they have called the Benton County Commissioner but has not been able to get help with this issue. CP states they were told there is a good neighbor law in Missouri and they are not following that. CP states the odor is so strong their whole house smells like it.

Comments On February 22, 2023 I spoke with the Concerned Party, Donna Johnson, by telephone and I explained that the state's odor rule, which is Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.165 Restriction of Emission of Odors exempts land application (see 10 CSR 10-6.045 Restriction of Emission of Odors (1) (B)).

Donna Johnson stated that she has COPD and has lived at this location for 30 years and does not wish to move.

She resides at a location that is approximately 200 yards from the land application activity.

The Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.165 Restriction of Emission of Odors exempts land application (see 10 CSR 10-6.045 Restriction of Emission of Odors (1) (B)).?

Concern No. 52575 Concern Info CP states Occupants are burning plastics and other unknown building material waste behind this address next to the cell tower. Has been burning since 12 pm and is still burning as of 645 pm.								
Comments I arrived at the address specified in the concern around 12:00 p.m. on 2/23/2023 where I was advised by the resident that the concern was next door at 5455 State Highway 25 in Gordonville. I was directed to meet with Mayor J.D King at City Hall since there wasn't anyone at the new construction site located at 5455 State Highway 25. J.D King informed me that the city of Gordonville have had problems with this site over the years. The owner is Brooks Moore, he has multiple rent properties in the area. J.D King stated that Brooks Moore does bring material on site and burn, then buries after the burn. I plan on calling Brooks Moore with the contact information provided by J.D King. I left fact sheets "Open Burning under Missouri Regulations - PUB 2047, Managing Construction" and "Demolition Waste -PUB2045" and "Illegal Disposal of Construction and Demolition Wastes - PUB-2251." While on site I used a service road for the cell tower referenced in the concern to take photos in which there are no violations to be noted, but there is fresh dirt work and heavy equipment on site. On this visit there was not any violations witnessed, but this site and Brooks Moore should be noted for the future.?								
No Violations at this time, But this site should be monitored.

<p>Comments I arrived at the old Lee Factory Building at approximately 3:10 PM on February 23, 2023. The site is fenced off at the outskirts of the building's parking lot. On top of that, the site is also taped off with tape warning of potential asbestos and there are also plenty of warning signs posted along the fencing. I drove around the building several times and did not observe any visible dust in the air during my investigation. There were a couple pickup trucks and a car inside the fencing. On the southeast side of the building there was a large roll-off dumpster setup against one of the bay doors of the building.</p> <p>According to the most recent project amendment (Amendment #2), site preparation was scheduled from February 20, 2023 - February 24, 2023, abatement is scheduled for February 27, 2023 - March 10, 2023, and demolition is scheduled for March 10, 2023 - March 31, 2023. Upon the date of my investigation, only site preparation should have been being conducted. I pulled over and made a phone call to Kevin Reese, Owner of Reese Equipment Company, LLC who is conducting the asbestos abatement and demolition project for this building.</p> <p>Kevin informed me that he was out of state for the moment, but that his son was the on-site supervisor while he was away. I informed Kevin of the concern that we had received and asked him what exactly his company was doing with the building currently. Kevin told me inside the building there was a lot of debris that they were clearing out and putting into the dumpster by the bay door. Kevin mentioned that vandals and looters and such had broken into the building and likely destroyed some things which they needed to clear out to make the area clear for abatement. Kevin assured me that they were still on the schedule listed in the latest amendment. Kevin also said that there was some various piping that they were clearing out as part of site prep along with the debris.</p> <p>Kevin assured me that the roof is rotting and some of it has fallen through, but no abatement or demolition has been conducted yet. Kevin told me that they will have to abate the building in sections using lifts from the inside of the building and that plenty of amended water will be used throughout the abatement. Kevin encouraged me to contact him with any further questions or concerns. I thanked Kevin for his assistance and ended the phone call. After the phone call with Kevin Reese, I drove around the building a few more times, continued to see no visible emissions, and left the site.</p> <p>This site is fenced off and taped off with plenty of warning signs around the exterior of the parking lot. I observed no visible emissions while I was at the site. I contacted Kevin Reese, owner of Reese Equipment Company, LLC (REC) who is conducting the abatement and demolition project on this building. Kevin informed me that the abatement project is still on schedule with the latest amendment. REC was conducting site preparation February 20, 2023 - February 24, 2023. They have a large roll-off dumpster against one of the building's bay doors and were loading debris and piping into it as part of site prep to clear the area and get ready for the abatement process. No violations noted of Title 40 Code of Federal Regulations Part 61 Subpart M - National Emission Standard for Asbestos or Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.170 Restriction of Particulate Matter to the Ambient Air Beyond the Premises of Origin.</p>

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
SERO	2/22/2023	2/22/2023	Private Citizen/Neighbor	Blackwell Washington	Scrap Tire Dump Open Burning General Water Quality	JE		

Concern No. 52919 **Concern Info** From the email: CP claims that neighbor is placing trash in nearby creek and is also burning tires.

Comments Upon receiving the concern, I reached out to the Washington County Missouri Department of Conservation Agent, John Lowe. John agreed to investigate the site and see if anything could be done. John visited the site on 2/24/2023 and did not observe any waste entering the nearby stream. He visited the site again the following week during a heavy rain event and stated that the water was not reaching the waste. Because we have not observed a responsible party depositing waste in the stream no violation was observed. There are burn piles on the property but no burning has been observed and no partial remains were seen to possibly determine what is burned.

Scheduling planned to meet with MDC Agent John Lowe for a joint visit.

On March 29, 2023, I met with MDC Agent John Lowe and visited the property. Upon approaching the home, no one would come to the door and we were unable to determine if anyone was home. Edward Foster Jr., neighbor, approached us and we discussed the concern with waste entering the stream. We requested that he work with the surrounding neighbors to help ensure that waste is containerized or fenced off from the stream if possible. John was able to obtain a phone number for the property owner and stated that he would continue to try and make contact with them. ??

While no violations were observed, MDC Agent John Lowe will continue to make efforts to watch the property and reach out where able. ?

Monthly Air Pollution Control Program Detail Report

Concerns Investigated Between February 16, 2023 and March 15, 2023

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 52647	Concern Info CP states a local business has purchased a few houses in Fredericktown. CP states that the first house they tore down appropriately but yesterday they tore down another house and burned it. CP states they know that house had asbestos siding on it because at one time they considered buying the house. CP states they have video and pictures of the house burning. CP states they also heard/felt 2 explosions while the house was burning. CP states one of the neighbors couldn't bring their children home because their house was full of black smoke. CP states they called the fire dept but nobody ever showed up. CP states today the house is still smoldering but the RP has been out with a dozer covering up parts of the house. CP states they are concerned with the asbestos and PVC pipes burning and the smoke drifted into town all day and neighboring houses.							
Comments	<p>On February 27, 2023, an investigation was conducted by Department Staff regarding open burning of building materials and a possible asbestos violation. It was confirmed by Paul Matthews that there were in fact two separate demolition projects conducted at least one year apart the first occurred before the responsible party had gained ownership of the structure that was demolished and open burned on February 23, 2023. Although the majority of the materials were hauled off and disposed of and the little remaining wood from the structure is presumed to be untreated, this act still violated the Missouri Air Conservation Regulation 10 CSR 10-6.045 "Open Burning Requirements" (3)(B). Failure to insure a 200 yards distance between the open burning area and any structure not owned by the responsible party is a violation.</p> <p>Letter of Unsatisfactory Findings was issued on 3/1/2023 for violation of 10 CSR 10-6.045 Open Burning Requirements. The activity was exempted as residential demolition from Title 40 Code of Federal Regulations Part 61 Subpart M---National Emission Standard for Asbestos.</p>							
SERO	2/28/2023	2/27/2023	G & W Grocery Store	Willow Springs Howell	Other	TR		
Concern No. 52627	Concern Info CP states that everything you buy inside of the store smells like what they have fried. He feels like the ventilation system needs to be checked. He spoke with the health about a year ago on the G&W and they haven't done anything. He has COPD and has to take a breathing treatment when he comes out of there.							
Comments	The concerned party was referred to the USDA - Food Safety and Inspection Service.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
SERO	3/1/2023	2/27/2023	Steve's Place	Waynesville Pulaski	Asbestos	DB		

Concern No. 52881 **Concern Info** The Concerned Party states that he believes that there was still asbestos in the building when it was demolished,

Comments called Greg Gerken, President of Gerken Environmental Enterprises, Inc., on March 1, 2023 and explained to him that we had received an environmental concern regarding a recent abatement project that Gerken had conducted at Steve's Place located at 207 Historic Route 66, Waynesville, MO. I explained to Greg that apparently there was some confusion with the asbestos inspection and inspector. Greg told me that the owner of the building had a lab analysis from a previous asbestos inspection that he wanted Greg to use. Greg instead had a new asbestos inspection done on the building. Scott Samuels conducted the new asbestos inspection. This newer inspection revealed more ceiling texture and floor tile that tested positive for asbestos.

?Some floor tiles and ceiling texture tested negative for asbestos, but all asbestos-containing floor tile and ceiling texture was removed in the abatement, according to Greg Gerken. Greg was kind enough to email me a copy of the asbestos inspection that Scott Samuels had conducted. I asked Greg if he could also send in an early post-notification and he told me that he was waiting on some waste manifests, but would send in the post-notification as soon as he received those. On March 16, 2023, the post-notification for the abatement at Steve's Place was sent in to the Air Pollution Control Program Asbestos Unit in Jefferson City.

Attached is the most recent asbestos inspection conducted by Scott Samuels with Gerken Environmental Enterprises, Inc. and the post-notification for the project also submitted by Gerken Environmental.

The owner of Steve's Place had a lab analysis from an old asbestos inspection that he wanted Greg Gerken to use, but Greg instead decided to have a new asbestos inspection done by Gerken's own Scott Samuels. This new inspection revealed more asbestos-containing materials than what was specified in the previous inspection. Greg Gerken informed me that some floor tile and ceiling texture did test negative, but all positive ACM was removed prior to any demolition. The most recent asbestos inspection and post-notification are attached. No violations noted of Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.241, "Asbestos Projects - Registration, Abatement, Notification, Inspection, Demolition, and Performance Requirements" or Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.080, "Emission Standards for Hazardous Air Pollutants" adopting by reference Title 40 Code of Federal Regulations Part 61 Subpart M, "National Emission Standard for Asbestos."

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
SERO	3/8/2023	3/2/2023	Beelman Trucking Co.	Ste. Genevieve Ste. Genevieve	Opacity	TR		

Concern No. 52741 **Concern Info** CP states venting a big cloud of dust out of their storage building. The building stores lime kiln dust.

Comments At the time of my investigation, the weather was cloudy, the temperature was 46 degrees Fahrenheit, the wind was from the East at 12 miles per hour (with wind gusts up to 23 miles per hour). The relative humidity was 62 percent. My observations began at 12:45 p.m. and ended at 1:27 p.m. when I went to the facility for an on site visit.

I spoke with Josh Pratt, Terminal Manager for Beelman Truck Company. We discussed that the facility does have a silo baghouse, which is serviced for bag replacement on an annual schedule. There are also filter screens on building exhaust fans that are inspected weekly and replaced as needed, which is generally monthly. Fan fan belts are also replaced about monthly. The facility unloads, stores and ships a ground stabilization product from Mississippi Lime Company to its customers.

Normally, building fans are shut off during truck unloading to prevent air release of product from the storage building. Recently, someone forgot to shut off the fans and there was a two minute release. Josh Pratt stated that a passerby took a photograph with his/her cellular phone.

Josh Pratt agreed to remind involved Beelman Truck Company personnel to shut down fans during product unloading.

No violation of applicable air regulations such as: Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.220 Restriction of Emission of Visible Air Contaminants was noted.

Comments	<p>On 03/02/2023 I contacted Shane Cornman by telephone, who was believed to be involved with the property. Shane Cornman informed me that he is familiar with the property, but it is operated by a family member. Shane Cornman stated he would attempt to contact the family member and would provide them with my contact information. He is unaware of any burning at the site.</p> <p>On 3/6/2023 Jesse Evans of the Southeast Regional Office's Solid waste Unit visited the site. We met with Victor Bagwell and a woman whose name was not disclosed who were supervising the project. We provided our credentials and explained the scope of the investigation. I informed the two that all activities at the site needs to stop immediately. We spoke of the history of the site, Victor informed us that his father owned it and operated a rent operation on site. Some of the demolition piles were burning at the time of the investigation. Victor implied they were burning a wood pile and the fire spread to one of the demolition piles. I brought up the fact that a demolition notification should have been submitted and an asbestos inspection should have been conducted before the project began. Victor stated that they were unaware of the regulations regarding asbestos documentation. We informed the two that a inspection of the demolition piles would determine if there is or is not asbestos in the pile and would determine how the material would be disposed of. I provided several fact sheets and a couple asbestos inspectors in the area for the party to contact. We thanked the two and left the site</p> <p>I spoke with Gay Worley on 3/8/2023 via telephone. I informed her of the asbestos regulations that have been violated and continued to inquire about the history of the property. She informed me that to her knowledge there had not been any business operated on this property on rent buildings in the past and storage recently. There were three building demolished all former rent or storage buildings. Gay and Victor have not been involved with the property until their father passed away in June of 2022 so the history of the property is not very clear. Gay stated the family would be out of town soon for a family trip but would reach out when they return. ?</p> <p>On 3/16/2023 Jesse Evens and I investigated a tip submitted to the department regarding demolition waste being deposited on a site which the waste did not originate from. This waste is believed to be connected to the building demolition located on highway 53 south of Poplar Bluff. We made a site visit, but were unable to access the property, photos were not taken due to the distance and obstructions between the road and the piles. I spoke with Alan Worley via phone and he stated the material was moved before DNR made our initial contact. Alan Worley stated that the group would be back in the county on Monday March 20, 2023 and he would contact the Department at that time.</p> <p>On 4/3/2023 I spoke with Michael Walker of Smith and Company Engineering in Poplar Bluff Mo. Michael was able to confirm that the floor tile on site contained more than 1% asbestos. ?</p>

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Conclusions								
?A letter of satisfactory findings was issued on DATE.								
SERO	3/9/2023	3/8/2023	Chris Savage	Iron Mountain Lake St. Francois	Other	TR		
Concern No. 52845 Concern Info CP states the RP has a mattress on an existing burn pile waiting to burn and a second mattress and box spring set to the side to burn also. CP states this is not the first they have seen of the burning.								
Comments At the time of my investigation, the two mattresses and the set of box springs were still on site as reported. Storage of such items on site is not a violation of the regulations. There was a burn pile and a wheeled trash receptacle from Freedom Waste also located in the front yard. It was not apparent that a mattress had ever been open burned at this location, however. Since no one answered the front door, I used a door hanger to leave behind my business card, a copy of the fact sheet Facts on Open Burning Under Missouri Regulations, and the Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.045 Open Burning Requirements								
On March 21, 2023 I contacted the City Hall at Iron Mountain Lake and I was informed that the mattresses are still on site. The City Clerk stated that there is a neighbor argument taking place between the Concerned Party and Chris Savage, the Property Owner at 1049 Parkway Drive in Iron Mountain Lake. I contacted City Hall because there is a local burn ordinance at Iron Mountain Lake and I wanted to inform City Hall personnel of this environmental concern .								
No violation of Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.045 Open Burning Requirements was observed.

<p>Concern No. 52828 Concern Info CP states there is black smoke from a residence next to Rolling Shoals. CP states they are unsure what is being burned but the smoke is very thick and black.</p> <p>Comments At the time of my investigation, I did not see any black smoke in or around Williamsville. I drove along Highway 49 past Rolling Shoals Farms and back and I did not observe any black smoke and I did not locate a blue house near Rolling Shoals Farms. For these reasons I was unable to confirm that there was an open burning issue.</p> <p>Further, since this was an anonymous concern, I was not able to contact the Concerned Party to make additional inquiries as to the exact location of the reported open burning.</p>								
SERO	3/16/2023	3/15/2023	Victor Bagwell	Poplar Bluff Butler	Open Dumps: Construction a Asbestos	HC		
<p>Concern No. 52801 Concern Info Anonymous caller reported a large pile (~15ft high, 25 ft wide) of apparent demolition waste is staged behind a mobile home and a smaller pile is located in front of a residential property. It was referenced that the waste is in connection with a demolition of a motel located on Highway 53 owned by Victor Bagwell (See Concern #4174, related to asbestos). Several large truck loads of waste were brought and dumped on property west of 322 CR 4072, Poplar Bluff. Worley tree services vehicles were utilized for transfer of waste.</p> <p>Comments On 3/16/2023 Jesse Evens and I investigated a tip submitted to the department regarding demolition waste being deposited on a site which the waste not originate from. This waste is believed to be connected to the building demolition located on highway 53 south of Poplar Bluff. We made a site visit, but were unable to access the property, photos were not taken due to the distance and obstructions between the road and the piles. I spoke with Alan Worley via phone and he stated the material was moved before DNR made our initial contact. Alan Worley stated that the group would be back in the county on Monday March 20, 2023 and he would contact the Department at that time.?</p> <p>This investigation will be taken into account when finalizing concern document #4172</p>

Comments	<p>I arrived at the location around 1:15 p.m. on March 22, 2023. I took photos of houses on both sides of East Lee. The house included in this concern located at 106 E Lee Street is being renovated due to damages from a storm earlier in the year. I viewed the property the best I could from the road side, because there was no one on site to provide access to the property. I spoke with a neighbor whose name was not disclosed. After I provided my credentials and explained why I was on site. The neighbor explained to me that the house that collapsed caught fire at some point last summer. The house that had caught fire and collapsed at 109 E Lee Street is not under the same ownership as the house being renovated that is located across the road. According to the neighbor, the house involved in the concern, which is 106 E Lee Street, has recently been worked on by the homeowner when the weather is favorable. I thanked him and left the property.</p> <p>I continued to the Hayti City hall to attempt to make contact with Frank Rose, who is the Code Enforcement Officer in Hayti. Frank Rose confirmed there was some confusion on shingle disposal in Hayti. Frank Rose informed the owner of the property that they would have to dispose of the shingles, not the City of Hayti. Frank Rose also confirmed there has been no burning at the property in question. The lack of burning at this property excludes the owners of any violations of Missouri Air Conservation Regulation 10 Code of State Regulation 10-6.045 Open Burning Requirements. I also spoke with Karla Laws who is the City Clerk.</p> <p>There is no need for further investigation because there was no evidence of open burning taking place on the property noted at time of the investigation. Moreover, this project at 106 East Lee Street is the renovation of a single family residence, which is excluded from the definition of facility under Title 40 Code of Federal Regulations Part 61 Subpart M---National Emission Standard for Asbestos. Fact Sheets provided to City Hall personnel are listed below.</p> <p>Asbestos Requirements for Demolition and Renovation Projects - PUB2157</p> <p>Asbestos: Inspection Report Requirements - PUB2349</p> <p>How to Handle Asbestos Containing Debris - PUB2121</p> <p>Illegal Disposal of Construction and Demolition Wastes - PUB2251</p> <p>Managing Construction and Demolition Waste - PUB2045?</p> <p>No violations of state and federal air regulations were observed.</p>

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Comments	<p>?On 03/08/23 I drove out to the coordinates the concern had listed. The coordinates were for a building owned by Three T's Partnership, LLC and is apart of the True Manufacturing Company. Upon arrival around 11:32 am , I parked at roughly coordinates: "38.807517244619596, -90.66249942618579". I conducted an odor investigation with the Nasal Ranger, starting at the dilution 60:1, 30:1, 15:1, 7:1, and then 4:1. No odors were detected at any dilution. I then drove to roughly the coordiantes : "38.80545189718469, -90.66245525334347" and conducted another nasal ranger investigation following the same procedure. No odors were detected at any dilution.</p> <p>At roughly 11:57, I stopped at O'fallon Castings and spoke with the EHS Manager, Rob Mondy, and the Maintenance Manager for O'Fallon Castings. I asked them if they had experienced any strange smells in the area. The facility stated they did have an indoor odor issue over the summer of 2022, with their recycled water, but it was resolved and any odor issues were kept indoors. After discussing the internal odor, the EHS Manager and Maintenance Manager asked if I was there for the alleged 55 gallon drum acitivity that True Manufcaturing had been conducting around 2-3 weeks ago at the building behind O'Fallon Castings. When I asked, they stated that they were not entirely sure what True Manufacturing was doing, but it seemed as if the facility was either burying or digging up 55-gallon drums. I told them that our Hazardous Waste Unit would take a further look into the issue, provided them my business card, and thanked them for their time.</p> <p>After speaking with O'Fallon Castings, I drove around the area surrounding True Manufacturing, but did not see any evidence of current 55-gallon drum activity. Nor did I pick up on any odors. At roughly 12:20, I stopped in at ABC Supply Company, and spoke with Branch Manager, Bruce Donaldson. I asked him if he had noticed any odor issues in the area. He stated that he was suspicious that True Manufacturing burning materials in or near a train car behind or near the building at coordinates: "38.80855620019225, -90.65976178420824". He also stated that since the ABC Supply Company moved into the current building in 2016, that he has noticed a strange chemical/plastic burning smell every few weeks that he believes is coming from True Manufacturing. He stated the smell is usually in the morning/late morning. I thanked him for his time, and gave him my business card to contact me if there was anything further he would like to add.</p> <p>Following meeting with ABC Supply Company, I drove over to the main manufacturing building and parked in front of Kohrs Truck and Auto Repair. I did one more nasal ranger investigation, following the same procedure, but did not detect any odor at any dilution.</p> <p>A site inspection of True Manufacturing will be conducted.</p>

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
SLRO	3/9/2023	3/7/2023	Unknown	Franklin	Open Burning	RA		

Concern No. 52954 **Concern Info** Online concern form:
Please describe your concern, including the location on the property.

The person that owns this property uses it for their camper. They have continued to pile building waste (so it's not visible from the road when driving by) and every time the owner is on the property he is constantly burning. The waste he burns is not from the property and he is bringing in cabinets, building materials, treated wood, etc that is not on the permitted burn list. He will burn the waste, then continue to burn the entire ground of his property (which is at least 5 acres). He burns on windy days and up close to the property lines of his next door neighbors (I do NOT want my house getting burned down because of his negligence). I have lung disease and he makes it impossible for me to breathe and I live several houses down. The contents he burns, the chemicals create black smoke and I cannot even open my door/window without my lungs/eyes burning.

Comments 3/9/2023 - RLA - Verified the concern was the same address as Concern #3131 which was received on October 27, 2022. The address listed on the form does not exist, but the directions tab confirms that it is the same property. I called the Sullivan Fire Department? and inquired about any fires on that highway. There had not been any fire called in on that highway since April of 2022 and that was in the 7000 block of hwy JJ.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 52955 Concern Info 3/7/23 TML: I spoke to the concerned party who is the neighbor and wanted to be anonymous. They stated that the property owner has been burning trash, plastics, and railroad ties. The smoke has caused her to have frequent headaches and they had to purchase an inhaler. A police report has been filed, the police officer gave the party a card with contact information. The officer's name is Christopher Masson and his phone number is 636-583-2560. The property owner is stated to be hostile.								
Comments ?MSC 3/8/23: I attempted to call Officer Masson at 636-583-2560 (Franklin County Sheriff's Office) twice for the incident report to see if there was a description of a burn pile but the mailbox was full. I called again to see if I could be put into contact with Officer Masson's supervisor. I was told that the squad I was asking about was not scheduled until Friday March 10th so it could be possible I would not hear from them till then. I left Sergeant Tracy Suttle a voicemail. I viewed the property on Parcel Viewer and found the owners listed as Terri and Jerry Rock. I chose to send a compliance assistance letter and relevant fact sheets to the property owners for the following reasons: The Property is large and partially wooded which decreases the odds of seeing a burn pile, the property owners are cited as being hostile, and this is first known concern filed for this address. I am also awaiting information from Franklin County Sheriff's Office. MSC 3/14/23: I tried calling office Masson once again this morning but the voicemail box was full.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No.	52962	Concern Info	Evelyn Burroughs is a resident of River Bluff Apartments (4600 S Broadway, St. Louis, MO 63111) and wanted to report of a strong odor in her area. Her apartment complex is right along the Mississippi River and, according to Ms. Burroughs, when the barges are sitting on the water and running, the muffler odor/fumes they emit are entering her apartment complex. On a scale of 1 to 5, with 5 being the strongest, Ms. Burroughs rates the odors at a 5 and says it is worse in the winter due to the heat being on in the apartment. This has been happening almost non-stop since Ms. Burroughs moved into her apartment 3-4 years ago; the only times Ms. Burroughs claims to have reprieve is at night or when the barges are not parked along the river. She lives with her elderly mother and father and they all suffer from burning eyes and breathing problems that they believe is linked to this issue. She submitted a concern to the "EPA" in about summer 2022 but it was dropped due to not being able to detect an odor at the time of the visit.					
Comments	I investigated the concern on 3/9/23. I visited Artco South (510-1390) at 4528 S. Broadway around 11:00 am. This plant is located directly underneath River Bluff Manor so is the most likely source of odor that could impact the apartment complex. I did not notice any odors at the plant. I toured the facility and observed the barges in the river. There were two barges being worked on at the time, and steam was coming out. There was no odor though. There were many hopper barges parked on the river in front of the plant, but I was told that these are either empty or contain grain. They do not have engines. I spoke with Amanda Brown, the environmental coordinator, who took the concern seriously but explained that they do not have barges idling for any significant period of time, they use very little diesel oil at the facility anymore, and have not noticed any strong odors. She told me that she would do a review of any idling practices and let me know if she observed any odors in the future. After investigating the plant, I drove to River Bluff Manor. I parked on the south side of the apartment complex and walked around the parking lot. I did not notice any odors at the time. On 3/10/23, I called Evelyn Burroughs to report my findings. She told me that she has not really noticed the odor outside of the apartments either. She has reported the odor to the apartment management, and they had maintenance go through the building and inspect the HVAC systems. A maintenance worker told her that the odors were most likely coming from barges. I explained that based on my current findings and investigation of Artco, I did not believe that the odors were coming from barges and agreed with Evelyn that it was most likely an issue inside the apartment complex. I explained that we did not regulate indoor air quality and gave her the number for the St. Louis City Citizen's Service Bureau. I also told her that she should speak with her neighbors and get as many people as possible to report the issue to apartment management.

Concern No. 52430 **Concern Info** Spoke to the reporting party that stated a neighbor is burning construction waste that contains asbestos. RP is concerned with their health due to the smoke. RP stated the driveway to the property is north, across the road from address 1697 Blue Creek Road, Chadwick, Missouri. The name of the road is sometimes spelled Bliyu Road. Loaded dump trucks and large equipment go down this road with the name "Rogers Construction" on the side doors.

Comments SharePoint #4020
?On March 1, 2023, I arrived on site to the area of concern located near 1697 Blue (Bilyu) Creek Road, Chadwick at approximately 1:00 p.m. The property of concern can be identified as Parcel ID: 22-0.6-23-000-000-002.000 and is owned by Frankie Rogers. At the time of investigation, the driveway was blocked with a gate with numerous signs marked no trespassing. From the public roadway I was unable to view the property or any indication of open burning. The concern stated that dump trucks and large equipment marked "Rogers Construction" drive up and down the road. However, I did not observe any vehicles identified as such. At this time the only connection is the fact the company named in the concern, has the same name as the individual who owns the property. At this time no violations were observed. ?

Comments	SharePoint #4045 ?On February 22, 2023 I arrived on site to the area of concern located near the intersection of Garden and First Street. From the public roadway I was able to view a lot on the southwest side of the intersection where a recent demolition of a home had occurred. I found no evidence of open burning or burying of any materials, in fact, a roll off dumpster full of waste was found in the driveway. No suspect asbestos containing materials (ACM) were found on site. I then performed a cursory review of the area and found another lot where a home had recently been demolished. This lot, located near the intersection of 2nd and Maple Street, was also clear of all materials. The only evidence of open burning was a small pile of vegetative waste. I did not observe any buried materials or suspect ACM on this site. I ended my investigation with no violations. ?

Comments SharePoint #4091 ?On February 28, 2023, I conducted an investigation at the location of 920 Gobblers Mountain Road, Reeds Spring, Missouri. Upon arrival I spoke to young man I later determined was an employee of Cody White, property owner and business owner of White Construction. White was contacted by phone and I spoke to him about the details of the concern. White explained he is building a bed and breakfast and the neighbors were upset this is moving into their area. White stated several have tried causing trouble. He wishes they would just come to talk to him instead of calling people of authority. White informed me he does not burn anything except vegetation from his own property. As he cuts limbs, they are piled and burned on acceptable days.

SWRO	3/7/2023	3/1/2023	Billy Mooneyham	Greene	Open Burning	TB		
<p>Concern No. 52725 Concern Info CP states that the RP is burying trade wastes from a landscaping business. CP states tires and other petroleum products are being burned as the smoke is often black.</p> <p>Comments SharePoint #4154-On March 7, 2023, at approximately 2:15PM, I arrived on site to the property of concern located at 4047 S. Farm Road 103, Brookline. Weather conditions at the time of investigation were mostly cloudy skies with winds from the SE at 12 MPH, a temperature of 57 degrees Fahrenheit, and a relative humidity of 40%. Prior to making contact with the owner, I performed a cursory review of the area from the public roadway on Farm Road 103. At this time I did not observe any signs of open burning such as flames or smoke. I then made contact with Isaac Mooneyham, the son of the alleged source of concern Billy Mooneyham. I introduced myself, provided credentials, and explained the reason for visiting. Mooneyham informed me that his father (Billy) was not here but would be happy to speak on his behalf. I asked Mooneyham if any burning had been conducted on the property. Mooneyham stated burning had occurred but only within the burn barrel behind the house. I asked for permission to view the barrel, Mooneyham agreed. I was able to confirm that only household wastes had been burned in the barrel. No evidence supporting the claims made in the concern could be found. I then explained and left fact sheets on Open Burning regulations with Mooneyham; who confirmed that he would pass this information along to his father (Billy). I then ended my investigation with no violations. ?</p>

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<p>Concern No. 52742 Concern Info Caller states that a developer is burning dozer decks (containing approximately 300 trees and brush) near their family member's home. The piles that are burning are located to the north, east, and southeast of the home. Caller states that the three piles are about 50 feet away and ashes are coming down on the porch. The smoke is blowing into the home, making conditions poor. The developer has apparently obtained a burn permit from Camdenton. Burning began on March 1, 2023, and the clearing activities started in October 2022, with several acres disturbed.</p> <p>Comments See Sharepoint #4162 On March 1, 2023 the Department received environmental concern #4162 in regard to the open burning of vegetative wastes near residential structures. On March 8, 2023 I arrived on site to the area of concern located near the intersection of HaHa Tonka Cut Thru and Hollyhock Drive. Weather conditions at the time were cloudy skies with winds from the ENE at 10 MPH, a temperature of 49 degrees Fahrenheit, and a relative humidity of 69%. The area of concern encompasses two separate land parcels, both owned by Greater Ozarks Real Estate Holdings. The two parcel IDs are 13-7.0-25.0-002.0-001-041.000 and 13-7.0-25.0-002.0-001-042.000 which cover an area of approximately 3 acres. The area surrounding the property is predominately residential housing to the west; with nearby businesses and local government buildings to the east.</p> <p>From the public roadways on HaHa Tonka Cut Thru, Hollyhock Drive, and Primrose Lane I was able to view the property in its entirety. No one was on site representing the property at the time of investigation. My first observation of the property found that the site has been recently cleared of tress and vegetation. These tree trunks, stumps, and limbs were put into three separate piles and burned. All three of these piles were within approximately 50 feet of nearby homes not owned by the entity (Unsatisfactory Finding 1). I then began to notice smoke rising from the pile nearest Hollyhock Drive to the south. No one was on site and this fire was not being supervised (Unsatisfactory Finding 2.) Since this concern had been received a week prior to the investigation and smoke was observed rising from one of the piles, it was determined that the piles were left to burn overnight (Unsatisfactory Finding 3). After taking photographic evidence of the property, I then ended my investigation.</p> <p>Since the property encompasses three acres and the entity disturbed/cleared greater than 1 acre; a land disturbance permit would be required in order to clear the land of trees and other vegetation. I then checked with fellow DNR Inspector Russell Reel and found that a Land Disturbance Permit had not been issued for this project (Unsatisfactory Finding 4).</p>

Concerns Investigated Between February 16, 2023 and March 15, 2023

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 52721	Concern Info Neighbor with a fire burning something that smelt like burnt paint after dark, unable to identify what it was, but believes it was plastic and diesel. Wind blew smoke to neighbors house. Cedar county sheriff came out, but they would not put out the fire. Concerned party found names off of the county assessors website, but believed it was Donahue conducting the burning.							
Comments	SharePoint #4250 On March 7, 2023 the Department received environmental concern #4250 in regard to the open burning of plastics which initiated an investigation on March 15, 2023 at 2:00 p.m. Weather conditions at the time of investigation were cloudy skies with winds from the south at 20MPH, a temperature of 60 degrees, and a relative humidity of 38%. Before making contact with a landowner I performed a cursory review and did not observe any indication of current open burning in the immediate area. I then approached the residence of concern and attempted to make contact with a landowner, however, no one was on site at the time. I then left my business card and fact sheets on open burning at the door. Looking north from the driveway I was able to observe an area along the fence line where burning has occurred, from this position I could only see untreated wood waste (tree branches). I then left the property of concern and came in contact with the adjoining neighbor to the north and concerned party, Arthur Greydanus. I introduced myself and asked for permission to view the burn area from his side of the property; Greydanus granted access. From this position I was able to view the above mentioned burn area in greater detail. Initial observations include a burn pile consisting of untreated wood waste, a pile of recyclable materials, and various solid wastes (small amounts of demolition waste and plastics) that are partially buried. While various solid waste scattered this area, no direct evidence of this material being burned could be observed. However, RSMo 260.210 states that no waste is to be burned OR buried. Therefore, the partially buried material must be recovered and properly disposed of at a permitted transfer station or landfill. After making observations of the property of concern, I thanked Greydanus for his time and ended my investigation. On March 16, 2023 I received a phone call from Maggie Donahue, the landowner of the property of concern. Donahue informed me that she had received my information and was returning my call. I explained to Donahue my findings and that an Unsatisfactory Finding would be issued for the improper disposal of a solid waste. I informed Donahue that any buried materials must be recovered and properly disposed and to submit all disposal receipts to my attention. Donahue agreed and stated they would begin removing this material. I then thanked Donahue for her time and ended our conversation. Violation RSMo 260.210

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Comments	<p>SharePoint #4303</p> <p>The Department received concern 4303 on March 9, 2023 and concern 4320 on March 13, 2023 (incident in concern 4320 occurred on March 7) in regard to open burning occurring at Springfield Iron and Metal (SIM). On Friday, March 10, 2023, I (Treavor Bussard) arrived on site to the area of concern at 7:45 a.m. Weather conditions at the time of investigation were cloudy skies with winds from the NNW at 10MPH, a temperature of 38 degrees Fahrenheit, and a relative humidity of 77%. Before entering the facility I performed a cursory review of the property from the N. Kansas Expressway Bridge. From this vantage point looking east, I observed activity on SIM property for approximately 20 minutes. No signs of open burning such as smoke or flames were observed. The only notable activity during this time was the loading and unloading of various trucks.</p> <p>I then made my way to the facility and requested to speak with David Braun, CFO. Braun and I briefly visited in the office where Braun described how metals from the shredding process end up on BNSF railway property. Braun stated the materials were from processing metals that have a high iron content, specifically engine blocks and transmission housings; adding they only run this kind of material approximately three times a month. Braun stated that flying metals are not always caused by explosions but is more likely to be the result of ricochet. Once materials are loaded onto the conveyor belt they are fed over a "roller" which helps direct the material downward into the shredder. Due to the force exerted by this roller metals can potentially ricochet beyond the shredder; as evident on BNSF property.</p> <p>After our conversation Braun took me on a tour of the facility where we viewed all processes. As stated in previous inspection and investigation reports, the shredder is only operated at night and was not in operation at this time. However, the facility was conducting maintenance on the shredder. Braun took me up to shredder level where we were able to view the internal components including the roller which causes the majority of projectiles.</p> <p>We then viewed the torch cutting area, which was also not in operation at this time. This process is the source of black and yellow smoke that has been reported numerous times. Torch cutting of metals does not meet the definition of open burning. However, the facility is still prohibited from burning (or torching) regulated materials that are attached to metals being cut, which would be considered open burning. On December 12, 2022, the facility was issued a violation for open burning after removing a thick rubber matting off large rollers, this violation was reported to Enforcement to be added to the RNOV. No other open burning occurs on the property.</p> <p>Finally, we viewed the copper recovery line, which was in operation. Braun added that Williams (Burrell Williams, yard supervisor) had made a few changes that significantly reduced the opacity from the process stack. At this time, opacity levels were 10%. I asked Braun if any maintenance records were kept on what was changed, Braun stated that no records were retained. I recommended to Braun that any maintenance activity associated with this process should be recorded for inspection purposes. Braun added they are working with an environmental consultant to submit an applicability determination to the APCP but was unaware of the progress. Braun and I then made our way back to the main office, ending my investigation with no violations.</p> <p>Changes tracked under this concern, duplicate to concern 4320</p>

Comments SharePoint #4288-No Violations-When I arrived on site, I knocked at the door but no one was home. I left my business card and fact sheets on open burning. I collected photographs from the driveway. No evidence of open burning of any kind was observed at the time of the investigation. The next Waylan Baker contacted me by phone and stated that all trade waste had been hauled to a transfer station. He attempted to send photographs of the bagged waste but those did not come through in the email. I did receive the receipt from the transfer station and it is attached to the photo addendum.

Comments	<p>SharePoint #4320</p> <p>?The Department received concern 4303 on March 9, 2023 and concern 4320 on March 13, 2023 (incident in concern 4320 occurred on March 7) in regard to open burning occurring at Springfield Iron and Metal (SIM). On Friday, March 10, 2023, I (Treavor Bussard) arrived on site to the area of concern at 7:45 a.m. Weather conditions at the time of investigation were cloudy skies with winds from the NNW at 10MPH, a temperature of 38 degrees Fahrenheit, and a relative humidity of 77%. Before entering the facility I performed a cursory review of the property from the N. Kansas Expressway Bridge. From this vantage point looking east, I observed activity on SIM property for approximately 20 minutes. No signs of open burning such as smoke or flames were observed. The only notable activity during this time was the loading and unloading of various trucks. I then made my way to the facility and requested to speak with David Braun, CFO. Braun and I briefly visited in the office where Braun described how metals from the shredding process end up on BNSF railway property. Braun stated the materials were from processing metals that have a high iron content, specifically engine blocks and transmission housings; adding they only run this kind of material approximately three times a month. Braun stated that flying metals are not always caused by explosions but is more likely to be the result of ricochet. Once materials are loaded onto the conveyor belt they are fed over a "roller" which helps direct the material downward into the shredder. Due to the force exerted by this roller metals can potentially ricochet beyond the shredder; as evident on BNSF property.</p> <p>After our conversation Braun took me on a tour of the facility where we viewed all processes. As stated in previous inspection and investigation reports, the shredder is only operated at night and was not in operation at this time. However, the facility was conducting maintenance on the shredder. Braun took me up to shredder level where we were able to view the internal components including the roller which causes the majority of projectiles. We then viewed the torch cutting area, which was also not in operation at this time. This process is the source of black and yellow smoke that has been reported numerous times. Torch cutting of metals does not meet the definition of open burning. However, the facility is still prohibited from burning (or torching) regulated materials that are attached to metals being cut, which would be considered open burning. On December 12, 2022, the facility was issued a violation for open burning after removing a thick rubber matting off large rollers, this violation was reported to Enforcement to be added to the RNOV. No other open burning occurs on the property.</p> <p>Finally, we viewed the copper recovery line, which was in operation. Braun added that Williams (Burrell Williams, yard supervisor) had made a few changes that significantly reduced the opacity from the process stack. At this time, opacity levels were 10%. I asked Braun if any maintenance records were kept on what was changed, Braun stated that no records were retained. I recommended to Braun that any maintenance activity associated with this process should be recorded for inspection purposes. Braun added they are working with an environmental consultant to submit an applicability determination to the APCP but was unaware of the progress. Braun and I then made our way back to the main office, ending my investigation with no violations.</p> <p>Changes tracked under concern 4303</p>

Comments	<p>SharePoint #4322</p> <p>On March 13, 2023 the Department received environmental concern #4322 in regard to the open burning of an older residential structure, which initiated an investigation on March 17, 2023. According to the concern report, the fire was observed on March 9, 2023 at a property located near the intersection of Farmers Branch and Southern View Road and alleged to be owned by Capital Quarries Company. Included in this concern are photographs submitted by the concerned party of the demolished home demolition waste on fire. Using aerial imagery from Google Earth, it was determined a single family residential structure existed on the property. According to the property card, provided by CCD, the single story home was built in 1914, and had two bedrooms for a base area of 1076 sqft.</p> <p>On March 17, 2023, Russel Reel, Environmental Scientist, and I (Treavor Bussard, Environmental Analyst) arrived on site to Capital Materials located at 1506 Farmer Branch Road, Ozark. I came in contact with a site operator and requested to speak with the Quarry Supervisor. Soon after I was met by Gene Haddock, Quarry Supervisor. I introduced myself, provided credentials, and explained that the Department was conducting an environmental compliance investigation. I asked Haddock if the quarry had performed any recent expanding or demolition work. Haddock mentioned the property of concern, stating that a home was torn down. I then asked Haddock what happened to the demolition waste. Haddock stated that any recyclable metals (mostly the roof) was collected and the remainder of the material was burned by the construction crew. I then asked Haddock if we could view the property, Haddock granted Reel and I permission to enter the property.</p> <p>The three of us then met at the property of concern located at 299 Southern View Road. We initially observed two back hoes and a large lot recently cleared. We observed two barns remained on the property and no evidence of demolition waste was left behind. I asked Haddock if any of the material, after it was burned, had been taken to a landfill. Haddock was unsure and referred any further questions to EHS, Chris Thiltgen. I explained to Haddock that since this material is considered demolition waste, it must be properly disposed, and that burning of this material is in violation of 10 CSR 10-6.045 Open Burning Requirements. Haddock confirmed the structure was intentionally burned and according to CCD Property information, had a base area of 1076 sqft. (40 cubic yards equals approximately 105 sqft). I explained that the open burning of greater than 40 cubic yards of demolition waste is a serious and significant, Group 1 Violation, which will result in the issuance of a Referral Notice of Violation. I then presented and explained the Departments Acknowledgment of Receipt which Haddock signed on site. Finally, I left Haddock with a fact sheet and regulations on open burning and ended this portion of the investigation.</p> <p>Shortly after, I received a phone call from Ericka Baxter, Capital Materials Area Operations Manager. Baxter informed me that she is aware of the situation and is prepared to cooperate fully so that compliance can be achieved. I informed her that the open burning of greater than 40 cubic yards of demolition waste is a serious and significant, Group 1 Violation, which would result in the issuance of a Referral Notice of Violation. Baxter requested to be the point-of-contact as she would be seeing this matter through. I then thanked Baxter for her phone call and taking quick action to this matter, ending our conversation.</p>

Concern No. 52778 Concern Info Remodeling house, they are burning lumber, plastic and every thing. Causing black smoke, irritating neighborhood.								
Comments SharePoint #4335 ?I arrived at the location of 9199 East Farm Road 116, Stafford, Missouri. Upon arrival, I observed a burn pit in the backyard with a fire in it. I knocked on the front door of the house and met with the property owner, Vitalie Cretu. I advised Cretu of the reason for my visit and explained the Open Burning Regulations as they would pertain to his situation and the concern details. Cretu invited me to the backyard where I observed a large piece of carpet that contained pieces of drywall and other remnants of household remodeling waste. Cretu stated he was waiting on a dumpster for proper disposal of the mentioned waste. I then walked over to the burn pit and noticed some lumber burning in the pit. I advised Cretu that he was not allowed to burn anything except untreated wood waste and brush. He understood. I left a business card and educational packet with him. I told him if he had any questions then to please call me.

Concern No.	52781	Concern Info	Caller stated Missouri Prime Beef is dumping waste into the creek that runs through her property, which discharges to the Pomme de Terre River. Ongoing for past several weeks. There is an odor that smells like a "toilet" or dead/rotting flesh. Has reportedly smelled everyday since Missouri Prime bought the operation. It reportedly did not smell when it was a pig plant. Caller is concerned about groundwater, as well, and does not want her drinking water to be contaminated. Three main concerns reported were: dumping waste in the creek, possibly hauling the waste and dumping it in a nearby quarry, the odors, and the potential contamination of the caller's well. Previous concern numbers that are similar to this concern: 4192, 4148, 3957, 4046, 3800, 3224, 2560, 1547, 1275, 1216, 633, and 255.

Concern No. 52811 Concern Info Caller said neighbors burn tires, oil, and trash. This is an ongoing problem causing a nuisance. The burned debris is going on to the caller property now too.								
Comments SharePoint #4350 ?Arrived on site and spoke to property owner Gerald Wilson. Wilson stated that he had not been burning anything other than household waste. He did admit that he had burned two mattresses two years ago due to bed bugs. The property just came out of probate and that he plans on selling the property in the near future. Wilson stated that he knew that he has some work to do before the property can be put up for sale. One burn pile was present with burnt household waste items and some solid waste items. He was advised to remove the solid waste and that it was recommended that he pick up the waste so that it does not leave the property. No waste was visible on adjacent properties. Based on the photograph submitted it appeared that the burn area consisted of mainly household waste. Visible on the edge was mattress wire that he admitted to having burned. Open burning regulations were discussed and an educational packet left on site with Wilson

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No.	52812	Concern Info	BNSF reporting two explosions at Springfield Iron and Metal during the early hours of March 15, 2023; occurring at approximatley 3:00 and 6:45 a.m. BNSF states that employees reported to the train master, that the first explosion was strong enough to shake "Building 12" and rattled lockers located in "Building 12A"					
Comments	SharePoint #4380 ?The Department received environmental concern #4380 on March 15, 2023 in regard to two explosions occurring during the early hours that day, at Springfield Iron and Metal. On March 16, 2023, I (Treavor Bussard) arrived on site to the area of concern at 10:00 a.m. To begin, I found myself on the northeast side of Springfield Iron and Metal (SIM) property, off W. Pacific Street; where I performed a cursory review of the area. At this time, I did not observe any torch cutting or the shredder in operation. It is important to note, as mentioned in other reports, that the shredder is only in operation overnight.Before making contact with SIM, I observed BNSF employees on the service road between SIM and the railway, I then came in contact with David Nickels, Superintendent of Operations. I introduced myself and explained that I was investigating the explosions at SIM. At this time I noticed other BNSF employees circling objects with white spray paint. Nickels informed me that employees are now going to being circling materials landing on their property from SIM in efforts to track when and how much material is being deposited. I then made my way to SIM and requested to speak with David Braun, however he was not on site at the time. I instead met with Burrell Williams. I explained the reason for visiting and inquired about the explosions. Williams confirmed they did have two explosions, one from an early model "square body" Chevy truck, and another from a crumpled/crushed aluminum boat. Williams stated that after the truck explosion the facility ceased running cars from that shipment and fined the source facility \$150. Williams added they will inspect the set aside vehicles again prior to being shredded. For the second explosion the facility received two crushed aluminum boats, which resembled a rectangle. The shredder operator inspected these boats and assumed them to be free of gas tanks. However, shortly after shredding one of the boats exploded. Williams and I then made our way to the shredder where I observed the held vehicles and second aluminum boat. I asked Williams to explain the inspection process. Essentially, the facility receives cars one of two ways; the first being everyday citizens selling their vehicles, and the second being other facilities sending vehicles to be recycled. The latter usually comes pre-crushed/flattened on truck beds prior to arrival at SIM. Regardless of the source of the vehicle, they are all inspected for gas tanks and batteries prior to being shredded. For civilian vehicles, the gas tank is drained, removed, and the trunk checked. For vehicles that arrived pre-crushed/flattened, they are unloaded, inspected, then flipped over to be inspected for the presence of gas tanks. Trunks are checked if accessible. I asked Williams what happens when the operator cannot confirm whether or not a gas tank is present. Williams answered that the operator will cut vehicles into multiple pieces using large shears and then each piece is inspected again prior to shredding. I thanked Williams for the information and suggested the facility enhance inspection procedures because while the explosions may not be regulated by the Department, the occurrences still imposes an immediate threat to not only SIM and BNSF employees, but potentially neighboring civilians. Williams agreed and stated the facility will reevaluate and enhance vehicle inspection to eliminate all explosions. I then ended my investigation with no additional violations.
